Dear customers,

The entire CDL team is proud to present its 2024 products catalog, where you will find our latest innovations in terms of equipment and technologies, without forgetting our distinctive products that have made CDL renowned.

Particularly for this edition, the transfer towards renewable energies, energy savings, automation and remote management, as well as the diversification of maple production leave their mark throughout the pages and products; since they are the major trends in our industry for the coming years. We must take advantage of the chance we have to produce new natural sweetening agents (syrup, high brix concentrate and maple nectar), which have the potential to be fully aligned with sustainable development.

CDL has a full range of equipment and new technologies ready to support you in this shift that is profitable for all maple syrup businesses, small or large. Collectively, we benefit from our industry produce less pollution while we continue to improve the efficiency, productivity of our maple groves and the quality of the maple syrup produced.

The coming years will force us to be sensitive to the recycling of plastic materials used in our industry. We also have the challenge to reduce installation costs. Certainly, CDL is already taking action to meet these objectives as quickly as possible.

In closing, we would like to reiterate our customer promise. CDL wishes to remain a leader in the maple syrup industry and offer to our customers a range of innovative products and comprehensive services, with a focus on quality and compliance with delivery times, and at the right price. At CDL, our commitment is to offer you the best customer experience in the region all year round, and especially when you need it most: during sugaring season.

The CDL team wishes you a productive 2024 sugaring season that will exceed your expectations. The industry needs it.

Enjoy the reading!

WHITE SPOUTS, 7% BETTER PERFORMANCE

ACCORDING TO A STUDY FROM THE ACER CENTER

When comparing sap yield, the white Maxflow spout gave a **SAP VOLUME 7% HIGHER** than the black Maxflow spout.

CONCLUSION OF THE STUDY

In the studied sugarbush, white spouts gave a higher volume of sap compared to the black spouts.

This increase, recorded in the last part of the season, would be related to the color of the spout and its thermal absorption properties.

BETTER GRIP ON TUBING!

The line of **5/16" Maxflow fittings** was specifically designed and developed for maple producers wanting to operate **over 25 in-hg (high vacuum)**. These fittings enable a perfect seal with a vacuum level beyond 25 in-hg and offers the following advantages:

- > No parting lines on the first barb.
- > Precision moulding.
- > Eliminates micro-leaks caused by molding lines.
- > Better grip on the tubing.

ENVIRONMENTAL HANDLING FEE (EHF) ON MAPLE SYRUP PLASTICS IN QUEBEC

November 2023

In Quebec, a company who markets agricultural plastic products, including maple syrup plastics, is responsible for the entire life cycle of its product, from manufacture to end-of-life recovery. This is known as Extended Producer Responsibility (REP).

In the current context, "producers" refers to maple syrup plastic manufacturers, who have joined forces to create the Association des manufacturiers de l'industrie de l'érable (AMIE) in 2023.

It was the ministère de l'Environnement, de la Lutte aux Changements Climatiques, de la Faune et des Parcs (MELCCFP) which introduced the Regulation respecting the recovery and valuation of products by enterprises (RRVPE) and mandated Recyc-Québec to ensure the proper management of this program.

This is a **regulatory obligation** for maple syrup plastic manufacturers, to set up a complete system for recovering these plastics.

Such a system entails significant costs related to the collection, sorting, transportation and processing of recyclable materials.

RECOVERY PROGRAM

The manufacturer of these plastics must have a program in place for the recovery, recycling program for these products, or be a member of an organization recognized by Recyc-Québec which implements the program on its behalf.

AgriRECUP (Clean Farms in English Canada) has been designated by Recyc-Québec as the Recognized Management Organization (RMO) and is implementing the agricultural plastics recovery system in Quebec.

ENVIRONMENTAL HANDLING FEE (EHF)

EHF is neither a tax nor a refundable deposit. It can be compared to the EHF applied to vehicle tires.

The EHF for each product covered by the regulations are based on the actual cost of recovering the materials contained in the product. All EHF are paid to the RMO to manage the system (collection, transport, recycling, recovery, R&D and program administration).

* For the years 2023 and 2024, the EHF has been set at \$0.35/kg of plastic purchased. The EHF is defined according to the quantities of plastic collected per reference year and the actual costs of the program. The year 2022 is the first reference year for the maple syrup plastics recovery system.

FINAL NOTES

- ✓ The amount of the EHF is subject to Quebec sales taxes.
- ✓ The final price of your purchase includes an EHF calculated on the basis of \$0.35/kg of plastic purchased.
- ✓ This fee is neither a tax nor a deposit, and is 100% dedicated to end-of-life management of this type of product and regulatory requirements.

Generally, the RMO, in conjunction with manufacturers, will reassess the amount of this EHF once a year.

4.0 Vision in Maple Syrup Production

1. Sugarbush

2. Pumping station

3. Tanks

4. Concentrator

5. Evaporator

6. Filtration

7. Barreling

8. Sugarbush certification

Automate its sugarbush from the forest to the barrel... This is our ultimate goal here at CDL! This desire, called Vision 4.0, is already changing what the future of the maple industry will look like: a sugarbush that is 100% automated and remotely controlled.

Vision 4.0 wants to create a complete synergy by connecting all the steps for maple syrup production, from the sap collection in the forest to the drop of maple syrup in the barrel. For several years now, we are working to make this vision possible and available for our clients through a complete family of equipment as well as a unique and unequal remote management system.

At CDL, the remote management of your sugarbush is possible via the CDL Intelligence system. CDL Intelligence combines all the key steps of production in a single complete and user-friendly platform. This system is reliable, easy to use and install, and will allow you to make a quick return on investment. With the remote automatic update, our support team can intervene in real-time in case you need assistance. Create for maple producers by maple producers!

Your data are accessible in a couple of clicks but mostly, you can manage all your connected equipment with CDL Intelligence at your fingertips.

Step by step, vision 4.0 is becoming real at CDL by following the maple sap path: from the forest to the pumping station, passing through the tanks to the reverse osmosis, and now the boiling step with the arrival of the Master-E, our new 100% electric and automated evaporator. Labor saving as well as yield gains are present.

What is happening next at CDL? We are currently working on the last step to complete the Vision 4.0 which is the filtration and the automated and autonomous filling of the barrels. These steps are important for the certification of a Sugarbush 4.0. Keep your eyes open as it should come soon... because innovation is in our blood.

LET CDL INTELLIGENCE DO THE WORK FOR YOU!

The CDL Intelligence system gives you 24/7 real-time access to your sugarbush's key data so you can better understand your performance and ultimately boost your profitability.

Choosing CDL Intelligence means choosing a simple, reliable, and stable system that will help you:

- > Understand your sugarbush's situation in real time
- > Make sure your pumping stations are working properly
- > Get the most out of your equipment
- > Take control remotely as soon as a problem arises
- > Save time and money

TESTIMONIAL

“Over the years, we’ve had several problems with backflow and mechanical pumps burning out in the spring. The CDL pump safety module quickly lets us know about backup and pressure issues by sending a notification to our phones if the pressure is too high or too low. It lets us diagnose the problem right away and saves us a lot of time and money. It even let me fix a major underground break last year. It paid for itself within a year, and I’ve installed them in each of my 8 pumping stations.”

This is the simple, robust and economical solution to keep your CDL high vacuum sap elevator out of the snow while saving you a lot of time.

TESTIMONIAL

I use the sap lifter throughout the entire season for my 400 taps where it's harder to get sap because of the incline. I enjoy working with my elevator. It doesn't freeze, it's easy to use, and it only needs propane for heating. Plus, its submersible pump barely lowers my vacuum compared to my old model, which backed up all my front lines.

I used to have to go check my lifter every morning to make sure it wasn't flooded. Now I don't have to go as often. I just have to go when I have a minute to make sure there's enough propane.

The much more efficient system means I save time and money every spring. For me, this investment was a must-have as soon as it was put on the market and I don't regret it one bit. I've been using it for three springs now.»

heRO INTELLIGENT VS REMOTE CONTROL

If your model is Intelligent, you will automate and manage 100% remotely all the features of your concentrator according to the defined parameters.

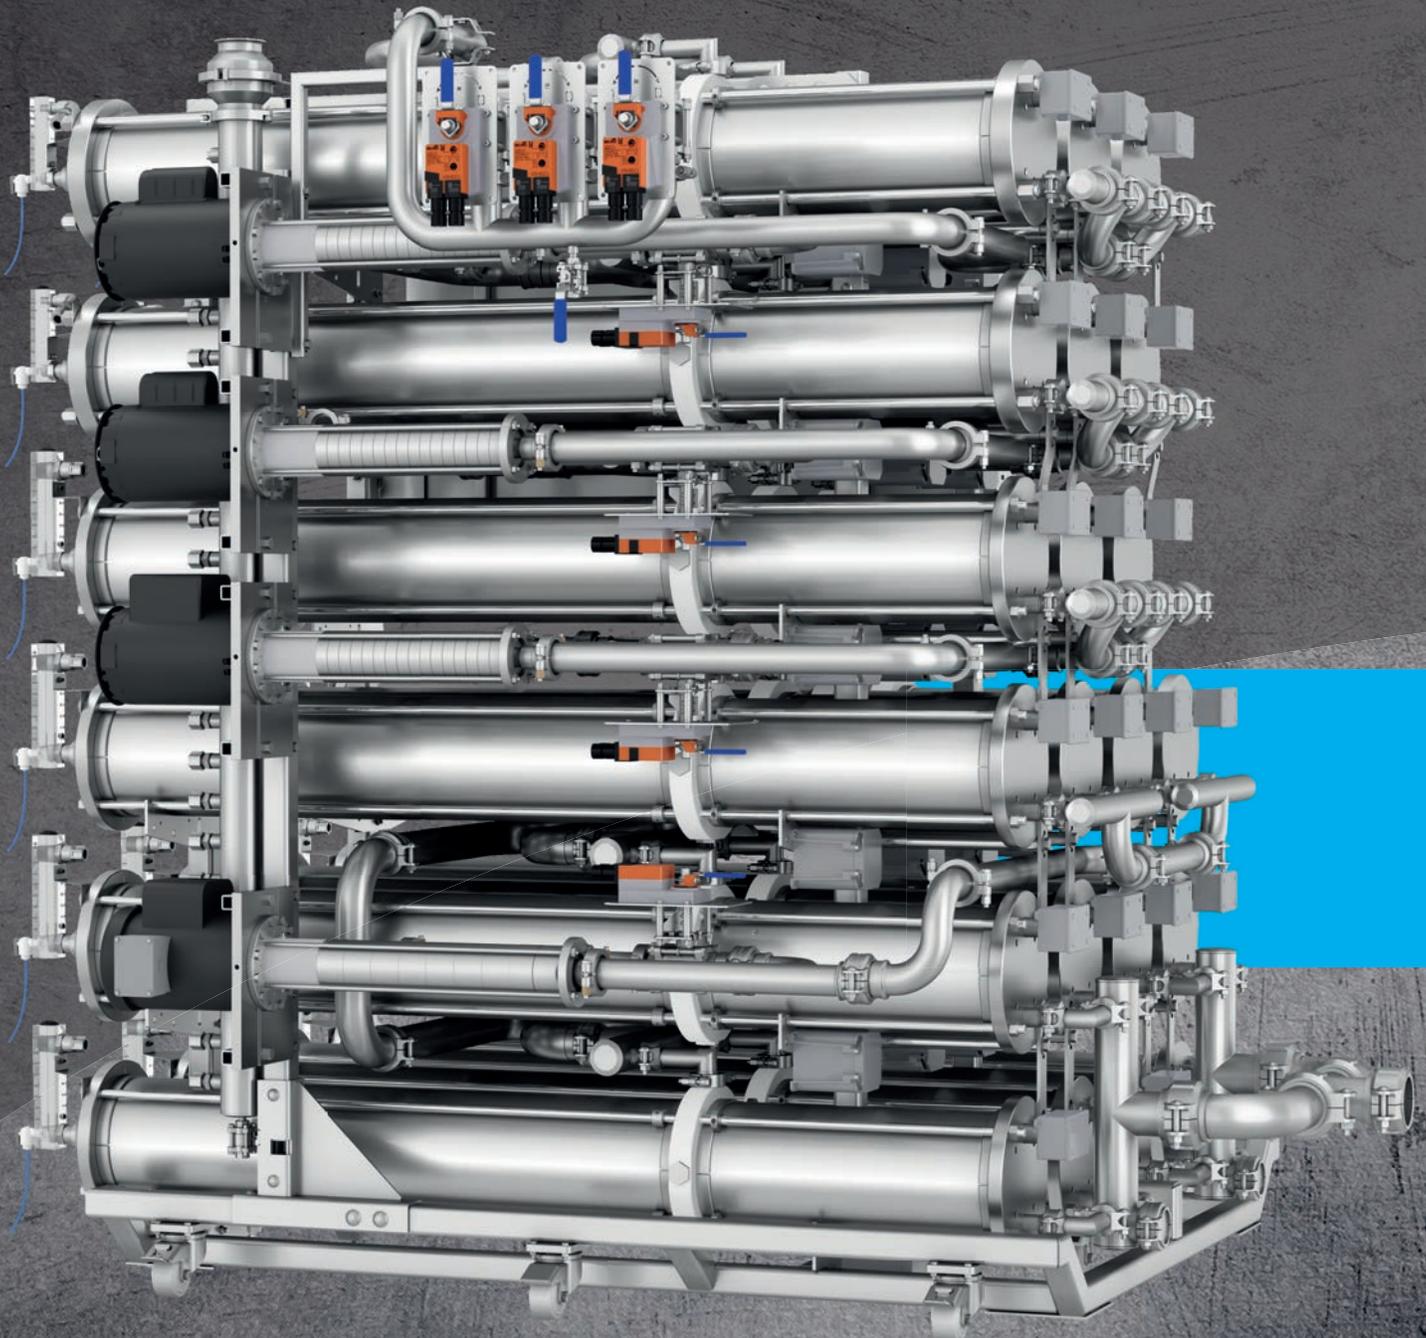

If your model is Manual, you can add control modules that allow you to perform certain functions remotely. However, this does not make it intelligent; you will have to perform the actions one after the other through the interface. This will require supervision.

TESTIMONIAL

“With the announced performance of the electric evaporator, we aimed to make 50% of the syrup we produce here per year. With the performance we had, we made between 70-75% of our 2023 syrup with the Master-E, or around 350,000 pounds of maple syrup alone.

My longest boiling period was 27 hours in a row running the machine; we did 17 hours, I ran out of concentrate, the osmosis took over, then I boiled for another 10 hours, I stopped it just because I ran out of concentrate, otherwise I would have continued operating on it.

I wasn't halfway through the season when I started letting the Master-E run on its own at night. I was sleeping at home, if there was a problem, I would receive a text alerting me. Often, in the early hours of the morning, I would receive a text that Master-E had run out of concentrate. I checked my cameras and there was really no more concentrate. At that point, I switched to de-sugaring and wash mode. When we came back here in the morning at 7:30-8 a.m., the evaporator was finishing its wash cycle, then we were ready to start our day again while waiting for the maples to start flowing.»

ADVANTAGES (15" presses)

- > Tightening with a 12 ton hydraulic cylinder with food grade oil, pneumatic or manually operated (not necessary to have compressed air);
- > Drip tray connected to the pump (Useful for closed loop de-sugaring or for pumping syrup from the tray);
- > Bypass valve installed on the front plate for greater efficiency;
- > Drainage of the inlet and outlet in the drip tray through the front plate;
- > Air drainage (optional);
- > Reverse air flow in the press outlet to extend filtration (optional).

AIR INLET KIT: Allows air to be pushed through the inlet to drain the syrup remaining in the filter press at the end of filtration.

AIR OUTLET KIT: When the filter press is partially blocked and the syrup flow slows, this option allows air to be pushed through the outlet to replace the contents of the filter press to extend the operating time before cleaning.

ADVANTAGES (20" presses)

- > Easy paper installation
- > Larger filtration capacity
- > Frame on wheels
- > Syrup pan underneath
- > Filtration capacity between 15 to 50 barrels
- > Hollow plates 3" thick
